

## **CIE AUDIO**

As part of the launch of the i-ceilings product range from Armstrong, UK representative CIE-Audio has arranged a schedule of masterclasses and free seminars for the audio, architectural and design industries.

"i-ceilings utilise flat-panel speaker technology to provide a loudspeaker system that matches Armstrong's range of ceilings, to combine their existing aesthetic and sound absorption qualities with the acoustic benefits of NXT flat-panel speaker technology. This allows for 'invisible' loudspeaker solutions which benefit from greatly increased sound dispersion, providing incredibly even levels of sound reproduction compared with the 'hot and cold' spots characteristic of traditional moving coil speaker technology," says a CIE spokesman.
