

i-ceilings Masterclass and Seminars

PLASA will see the official launch of the new 'i-ceilings' product range from Armstrong. As part of the launch, exclusive UK representatives - CIE-Audio - have arranged a programme of Masterclasses and free seminars.

A brand new concept in integrated acoustic ceiling systems, 'i-ceilings' is the latest development from the world's leading manufacturer of ceiling products. i-ceilings utilise flat panel speaker technology to provide a unique loudspeaker system which exactly matches Armstrong's market leading range of ceilings, to combine their existing aesthetic and sound absorption qualities with the acoustic benefits of NXT flat panel speaker technology. This allows for 'invisible' loudspeaker solutions which benefit from greatly increased sound dispersion, providing incredibly even levels of sound reproduction compared with the 'hot and cold' spots characteristic of traditional moving coil speaker technology.
